

PORTABLE PNEUMATIC TUBE CLEANER

The portable pneumatic tube cleaners use hollow shafting of different diameters as per tube I.D. to be cleaned which can be coupled together to form lengths as per the length of the tube to be cleaned. Water flows through the hollow tube and washes out deposits that are dislodged by the cleaning tools attached to the driven shafts. Typical cleaning tools used are carbide drills for severely clogged tubes, brushes for light deposits and buffing tools for final polishing of tubes. The water flow is independently controlled allowing the user to determine how much water is needed in the application.

Model TCP-3075 is typically used on oil coolers, heat exchangers and condensers & pressure vessels for Tube I.D. 19.1mm to 28mm

Portable Pneumatic Tube Cleaner Accessories :

1 Hollow Drive Shaft

2 Hollow Driven Shaft

3 Drive Coupling

4 Shaft Coupling

5 Starter Drill

Cleaning Tool :

1 Nylon Brush

2 Brass Brush

3 Stainless Brush

4 Carbide Drill
